Business Development & Product Agronomist

Lahore, Pakistan • Join our team across Canada, the US and Pakistan

LOCATION	TYPE	REPORTS TO	APPLY BY
Lahore, plus travel	**Full-time**	**Chief Operating Officer**	**November 15, 2026**

About TerraSkyAI

TerraSkyAI is a Canadian precision agriculture company, founded in Alberta with operations in Canada, the United States and Pakistan. Our SkySight platform turns high-resolution drone imagery into plant-level analytics for some of the world's largest seed and crop science companies. In 2026 alone we flew and analysed more than 20,000 acres of seed production and pre-scout fields across Western Canada and the US, and we're now expanding into Pakistan and Brazil.

The role

This is a core seat on our agronomy and product team. You'll lead agronomy for our Pakistan, Canadian, US and Brazil programs and represent it in team and client meetings, turning field problems into products clients pay for.

We hold ourselves to best-in-class delivery, and we look for people who want to grow fast and be measured on results. If you're looking for a steady, predictable role, this isn't it.

What you'll do

Product and models

- Scope each client's use case and build the crop-by-crop model roadmap (potato, rice, canola and more) with our ML engineers, annotators and developers.
- Be the agronomy expert behind our computer vision: what the model detects, at which crop stage, and what accuracy matters in the field.
- Set labelling guidelines and ground-truth standards for the ML, CV and annotation team.

Clients and business development

- Own delivery of every finished product, through to the client getting the value they expected.
- Represent TerraSkyAI in client and partner meetings in Pakistan and abroad, including the US, Canada and Brazil.
- Drive business development through scoping, proposals and technical credibility.

Field data and team

- Set aerial data collection protocols with each client's field team: timing, crop stage, flight parameters and ground-truth sampling.
- Hire, train and supervise UAS pilots for accurate data collection, labelling and uploads.
- Run QC on collected data and keep results on schedule for every client.

What you bring

- MBA in Marketing or Business Intelligence, preferably from LUMS, IBA or NUST.
- A bachelor's or higher in Agriculture, Agronomy, Plant Science or a related field.
- 3+ years in agronomy, seed production, crop protection or agri-inputs, in a client-facing or commercial role.

- Quantified results in your CV: revenue, acres, clients or programs you were responsible for.
- Solid working knowledge of Western Canadian crop production: hybrid canola seed production, cereals, pulses, potatoes and irrigated Southern Alberta.
- Strong command of Pakistan's high-value crops and growing regions, especially potato, rice, wheat, cotton, maize and horticulture.
- Hands-on crop scouting, field inspection or seed production experience. You know pests, diseases, weeds and crop staging well.
- Commercial acumen: scoping engagements, building the value case, and holding your own in pricing and contract conversations.
- A track record of leading technical or field teams.
- Fluent English and Urdu, written and spoken, at the level international clients expect.
- Working knowledge of precision ag, remote sensing or GIS tools (QGIS, ArcGIS, Pix4D).
- Experience at a multinational seed or crop science company.
- Willingness to travel internationally.

Nice to have

- Drone imagery interpretation, or a UAS pilot certificate
- A grasp of how CV models are trained: annotation, ground truth, precision and recall

Growth and performance

- Performance reviewed twice a year, with pay and title moves tied to results, not tenure
- A clear path to Head of Agronomy as our Pakistan and Brazil programs grow
- Direct work with our founders and with the CV, ML and data teams in Canada
- Training and certification support, including UAS pilot certification and precision ag courses
- Exposure to international clients and field programs in North and South America

What we offer

- Competitive salary based on experience, reviewed every year
- Annual performance bonus tied to client delivery and retention
- Fuel allowance, plus mobile and internet allowance

Our hiring process

A screening call with our Lahore team, then a case exercise on a real crop problem, then a final interview with our Lahore and Canada leadership.

How to apply

Email your resume and a one-page note to **support@terraskyai.com**

In your note, pick one high-value crop in Pakistan, describe a problem drone imagery and AI could solve for its growers or seed producers, and explain how you would prove the value to a paying client.

Applications without this note will not be reviewed.

Subject line: **BD & Product Agronomist, Lahore**

Application deadline: **November 15, 2026**

Shortlisted candidates will be asked to complete a background and reference check. We appreciate every application, but only shortlisted candidates will be contacted. TerraSkyAI is an equal opportunity employer and welcomes applications from all qualified candidates.
